Subject: FW: Electric vehicles

Thanks for getting back to me. There are currently no charge points in Liskeard except one slow charger at Trevellis house which is an overnight charger.

I have just got an electric car via motability lease but cannot have a home charge pod installed because of a public right of way footpath across the front of the house which would mean a trip hazard if charging cables were put across it. Therefore we have to rely on public charge points.

We are given a subscription to BP Pulse and the nearest charge point is at China Fleet which is 8 miles away.

The one at Trerulefoot is Shell and is very expensive.

Therefore a charge point in the village would benefit me personally a huge amount and I would be grateful if the PC could look into it. I understand there are a number of grants available for this purpose though I am unsure what and how much, just that Motability mentioned it when I spoke to them.

Subject: Electric vehicles

Hi John,

Hope you are well? I was wondering how to go about asking if there may be any plans, or if no plans, how to go about asking to have an electric vehicle charging point installed in the village please? Perhaps in the free car park on Hartmeade? There are more and more electric vehicles and not enough charge points locally and many people cannot have one put in at home.
